

In the Specification

Please replace paragraph 0056 on page 14 with the following marked up paragraph:

--One embodiment of a system 740 suitable for use in the environments of Figure 5 is illustrated in Figure 6. The system 740 includes a processor 750, memory 755 and input/output capability 760 coupled to a system bus 765. The memory 755 is configured to store instructions which, when executed by the processor 750, perform the methods described herein. The memory 755 may also store data such as the set of FMM and the set of values. Input/output 760 provides for the delivery and display of the data or portions or representations thereof. Input/output 760 also encompasses various types of machine or computer-readable media, including any type of storage device that is accessible by the processor 750. ~~One of skill in the art will immediately recognize that the term "computer-readable medium/media" or "machine-readable medium/media" further encompasses a carrier wave that encodes a data signal.~~ It will also be appreciated that the computer is controlled by operating system software executing in memory 755. Input/output and related media 760 store the machine/computer-executable instructions for the operating system and methods of the present invention as well as the set of FMMs and the set of values.--
